 HydraSoil[®]

- Improves Water Uptake in Non-wetting Soils
- Specially Formulated to Reduce Nutrient Leaching
- Enhances the Uniform Application of Soil Applied Pesticides
 While Reducing Run-off
- Improves Seed Germination in Non-Wetting Sands
- Reduces Soil Erosion

20 LITRES

GENERAL NOTES

HydraSoil[®] is a specially formulated soil wetting agent designed to improve water penetration into water repellent soils. It's unique design maximises water uptake without causing excessive movement through the soil profile. This reduces the problem of nutrient losses or nutrient leaching away from the plant root zone.

APPLICATION RATE

HydraSoil[®] is applied either by boom spraying or can be spot treated or band treated. Once applied, HydraSoil[®] should be washed off the leaf surface as soon as possible and drenched into the soil.

TANK MIXES

HydraSoil[®] is only compatible with pesticides or fertilisers that need to be drenched into the soil. DO NOT apply with products that must persist on, or near the soil surface.

Situation	Dose Rate	Comments
Turf	250ml/100m ²	Apply every 4-6 weeks during late spring and summer.
Pot Plants/ Gardens	2ml/L	Drench into pots or apply to media before transplanting. Top ups may be needed every 6 weeks.
Broad-acre sowing	500ml/ha in 60-100L of water	Apply at seeding with trailing wetting agent applicator mounted behind a furrow sowing combine.
Pest Control	5ml/L	Add to soil drenched pesticides for better distribution throughout the targeted area.

NOTE: Because Organic Crop Protectants has no control over handling, storage or use of HydraSoil[®] the company makes no expressed or implied representation or warranty (other than non-excludable statutory warranties). This product is sold on the condition that the buyer and/or user assumes all risk of the handling and use of HydraSoil[®] as well as the results obtained from it's use.
