

Field Trial Summary

GYP-FLO Potatoes

(Soil Type: Medium Clay)

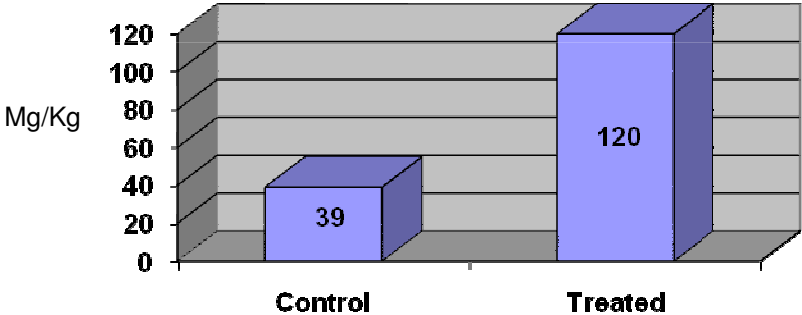

ULTIMATE
AGRI-PRODUCTS

Field Trial Summary

Town: Tyringham
State: New South Wales
Crop: Potatoes
Soil Type: Medium Clay
Irrigation Type: Overhead
Application Rate: GYP-FLO was applied at 50 litres per hectare at planting
Test Results Conducted by: Agrifood Laboratory (Report No: 20010575)

Tuber Calcium Content mg/kg

Conclusion: "Calcium levels were trebled in the treated potatoes when compared to the untreated plots. The results above suggest a specific and dramatic increase in Calcium levels was solely attributed to GYP-FLO applications". By increasing the Calcium levels it has lead to greater weights and extended storage life.
