GENERAL INFORMATION

Aminogro® MAXi Magnesium provides plants with a magnesium chelate using L-form free amino acids and other simple organic sugars and acids. Nutrients are absorbed and shuttled around inside plants in the form of amino acids, simple sugars and acids so OrganoPLEX™ is an efficient way of delivering and mobilising magnesium in plants. The organic carbon in Aminogro® MAXi Magnesium also enhances microbial activity in soil which assists the plant accessing magnesium and other nutrients when applied to the soil.

DIRECTIONS FOR USE:

COMPATIBILITY

Aminogro® MAXi Magnesium can be mixed with most horticultural sprays. However, the performance of some sprays may be affected by high cation levels like calcium, potassium and phosphorus. It is best to apply these sprays separately or conduct a jar test to determine compatibility in the ratios they are to be used. Always check pesticide labels for compatibility with foliar fertilisers, or test the mixture on a small area before widespread application.
